

Opened: Monday, 6 July 2026, 12:00 AM

Due: Monday, 13 July 2026, 12:00 AM

1. Write a Java program to display "Hello, Java!" and demonstrate the basic structure of a Java program.
2. Write a Java program to declare variables of different primitive data types (`byte`, `short`, `int`, `long`, `float`, `double`, `char`, and `boolean`) and display their values.
3. Write a Java program to perform arithmetic operations (addition, subtraction, multiplication, division, and modulus) on two integer variables.
4. Write a Java program to perform arithmetic operations on floating-point numbers and display the results.
5. Write a Java program to demonstrate character data type by displaying a character and its corresponding ASCII/Unicode value.
6. Write a Java program to demonstrate the use of Boolean variables and Boolean expressions.
7. Write a Java program to declare and initialize different types of variables and display their values.
8. Write a Java program to swap the values of two variables using a temporary variable.
9. Write a Java program to demonstrate automatic (widening) type conversion between primitive data types.
10. Write a Java program to demonstrate explicit (narrowing) type casting from one primitive data type to another.
11. Write a Java program to convert a character to its ASCII/Unicode value and vice versa using type casting.
12. Write a Java program to check whether a given number is even or odd using the `if-else` control statement.
13. Write a Java program to find the largest of two numbers using the `if-else` statement.
14. Write a Java program to demonstrate the use of Java reserved keywords by creating valid identifiers and explaining why keywords cannot be used as variable names.
15. Write a Java program to demonstrate the use of the for loop by displaying numbers from 1 to 10.
